1. Type 2 Diabetes: A chronic disease we can prevent or delay

- 5.6 million to 20.9 million people in the United States have diabetes. The number increases every year.

2. With a changing epidemiology

- The way diabetes appears in our children is changing. Youth with diabetes are failing to control their condition, even after being treated with medicine.

3. That we can help prevent

- The National Diabetes Prevention Program, under the direction of the Centers for Disease Control and Prevention (CDC), is a public-private partnership of community organizations, private insurers, employers, health care organizations, and government agencies that offers evidence-based diabetes prevention in local communities. The National Diabetes Prevention Program, under the direction of the Centers for Disease Control and Prevention (CDC), is a public-private partnership of community organizations, private insurers, employers, health care organizations, and government agencies that offers evidence-based diabetes prevention in local communities.

4. Through screening improvements

- Screen at-risk asymptomatic patients for prediabetes and diabetes.

Refer people diagnosed with diabetes to disease management programs in their communities.

Increase awareness of the National Diabetes Prevention Program and its benefits among health care professionals.

Screen at-risk asymptomatic patients for prediabetes and diabetes.

Refer people diagnosed with diabetes to disease management programs in their communities.

Increase awareness of the National Diabetes Prevention Program and its benefits among health care professionals.

Screen at-risk asymptomatic patients for prediabetes and diabetes.

Refer people diagnosed with diabetes to disease management programs in their communities.
